DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Cotteverte et al (US 2002/0074307).

Cotteverte et al disclose an etching process including the steps of forming a first mask as a hard mask and a second masks are respectively made of metal and a photoresist material on the substrate, wherein the first and the second masks overlays or superimposed with each other and considered to be patterned to form exposed and covered areas on the substrate to be etched (see paragraphs 0018-0022).

Cotteverte et al also disclose that after etching the substrate according to the masking patterns, removing both the first and the second masking material (paragraphs 0045,0046).

As to claims 3-6, Cotteverte et al disclose that the first mask comprises metal such as chromium and also teach that etching the substrate using the mask pattern, wherein the first masking layer is different from the substrate and the second masking layer is made of different material from the substrate and the first masking layer (paragraphs 0039-0041).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Coronel et al (US 2002/0012851) disclose a process of using a first and second masking or shielding layer, wherein the first masking layer is chromium and second masking layer is photoresist (see paragraphs 0045-0047); Keyser (4,484,978) discloses an etching process utilizing two masking layer of metal and photoresist material; Desilets et al (4,826,564) teaches an etching method using plurality of masking layer and Shibata (6,814,879) teaches a process of using two different types resist material.
